[@i80gold](https://twitter.com/i80gold)

In his extensive career Mr. Downie has participated in several gold and base metal discoveries. He has been awarded accolades to reflect this success including the 2003 recipient of the Prospectors and Developers Association of Canada, Bill Dennis Prospector of The Year and several Exploration, and Development acknowledgements from the Northwestern Ontario Prospectors Association including this years' Lifetime Achievement Award

Ewan Downie is an accomplished mining executive who has built multiple companies and one of few industry participants who have successfully realized the transition from mineral explorer to producer with mining operations. He is currently the Chief Executive Officer of i-80 Gold Corp., one of mining's most exciting growth-focused companies that is currently advancing multiple high-grade projects to production in mine friendly Nevada, USA

i-80 Gold Corp. has assembled an impressive portfolio of prospective properties and two processing facilities in North Central Nevada - in the heart of one of the world's most productive gold districts. The Company offers metals diversification with its plan to develop multiple mines that will produce gold, silver and base metals to realize its goal of becoming the second largest gold producer in the United States.

GOLD CORP

The Company's key projects include Ruby Hill, that is host to gold and poly-metallic deposits, McCoy-Cove and Granite Creek. These properties are host to multi-million ounces of gold and silver resources and comprise some of the highest-grade development-stage gold projects in North America. Mining operations are currently ramping up at Granite Creek and a major surface and underground drill program is underway. The Phase 1 underground development program has been completed at the Helen-Cove Mine and the ongoing drill program is yielding impressive high-grade intercepts, often well in excess of 10 g/t Au over substantial widths. While advancing permitting to commence underground development at Ruby Hill, a major drill program is underway to define and expand both gold and poly-metallic mineralization.
